

Upgrading to iPassConnect 3.40

Version: 1.0, December 2005

This document explains how to upgrade a previous version of iPassConnect (including iPassConnect 2.x or 3.x) to version 3.40.

iPassConnect 3.40 is supported on the following Microsoft Windows operating systems:

- Windows 2000 SP 4 or later
- Windows XP Home or Professional SP 1 or later

Also, in order to be eligible to upgrade to iPassConnect 3.40, you must be running iPassConnect version 2.20 or later.

To upgrade to version 3.40,

1. Launch your current version of iPassConnect and connect to the iPass network. (Alternately, launch iPassConnect and do a LAN Phonebook update.) iPassConnect will download all required upgrade files.
2. Exit iPassConnect.
 - a. *If running iPassConnect 2.x*, exit the client by clicking **Exit**.
 - b. *If running iPassConnect 3.x*, exit the iPassConnect 3.x client by right-clicking on the iPassConnect system tray icon and choosing **Exit**. (If you don't exit iPassConnect 3.x, then iPassConnect 3.40 will be installed in English by default.)
3. Launch iPassConnect again and connect to the iPass network.
4. The iPassConnect Downloader will run and prompt you to download the installer for iPassConnect 3.40. (There may be a short delay before the Download prompt appears.)
 - a. If the Speed Prioritized Update feature is enabled, then iPassConnect will wait to perform a software update until you connect over a high-bandwidth connection. (Typically this is a LAN connection of 128 kbps or greater.) Otherwise, the download will proceed.
5. Click **Download Now**. The installer will download to your computer. (Interrupted downloads will resume at the interruption point when you reconnect.)
6. After the download is complete, click **Install Now**.
7. Your iPassConnect connection will be terminated. Your existing iPassConnect will be uninstalled, and iPassConnect 3.40 will be installed in its place. iPassConnect 3.40 will be launched automatically upon the completion of the installation.
8. Upon first starting, iPassConnect will initialize and will take a few moments to process the new Phonebook database. This processing will only occur the first time you start iPassConnect after upgrading. iPassConnect 3.40 will then be ready for use.
